

Referential transparency is to methods as \_\_\_\_\_  
is to variables.

Unlike Java, what does try/catch/finally ...

Name the built-in control structures.

What are the results of:

```
`def f(): Int = try {return 1} finally{return 2}
```

```
def g(): Int = try {1} finally {2}`
```

Why doesn't Scala have `break/continue`?

Give an alternate `for` expression syntax.

`finally` can be used...

What is the value of `try/catch/finally`?

Give two strategies for living without  
`break/continue`.

Exception handling is...

Write a `do-while` loop.

Give an example of matching on a `String`.

What is the result of assignment?

What do `to()` and `until()` result in?

What do `for` expressions result in?

What do `throw` expressions result in?

Why do scripts appear to allow re-declarations?

Give the `try/catch` syntax.

What is the difference between Java and Scala scoping rules?
