Whitespace is ...

... not significant.

What is the comment syntax?

What's the catch?

As in Java, in-line `//` and multiline `/* ... */`.

Unfortunately, the multiline delimiters can appear in string literals, making commenting out arbitrary blocks of codes unreliable.

What's strange about JavaScript's numerical types?

There are no integers, or floating point of any size other than 64-bits.
There are no characters either.

Create an exponential literal.

`xey` is the same as `x * pow(10, e)`.

Descript the string syntax.

How are they encoded?

As in Python, single or double quote delimiters can be used.

16-bit fixed Unicode is used.
