What is the comments syntax?

```
(* multiline comment *)
//inline comment
```

How are blocks and similar structures
represented in F#?

Using indentation, not braces. Whitespace is significant.

What character is allowed in identifiers that
Scala and Java do not permit?

Apostrophe (').

How can you force identifier interpretation for a token?

Surround with **double** back ticks.

How are bindings created?

With the `let` keyword, for either values or functions.

Give the multiple assignment syntax.

```
let ident1, ident2 = val1, val2
```

How are documentation comments created?

In Visual Studio, by beginning a comment (or each line thereof) with `///`.

On the REPL commands are terminated with what?

;;

How can you send code from a project to `fsi` in visual studio?

Select the program text and hit Alt + Enter.

What is odd about the order of source files in
Visual Studio?

It matters. The programmer is responsible for selecting the correct order of compilation, only using definitions present in earlier files.
