What is a *type*?

What is a *typing relation*?

A term in the domain of the typing relation is called ...

An algorithm for assigning types to terms
follows directly from what?

How might you prove that a term has a given type?

How do you know when the evaluation of a term is "stuck"?

How can we formalize the notion of a type
system's soundness?

Given the "no stuck states" formalization of type soundness, how can type soundness be proved.

Why is the preservation property often called
subject reduction/evaluation.
